Protect your
data with Aperio[®]
wireless locking
technology

Experience a safer
and more open world

Add access control to server racks

Upgrade your cabinets with Aperio

Securing access to your most valuable resource

Managing and monitoring physical access to data can be a challenge when servers or data storage is on-site – even more when you use co-located or third-party data centres. Data also brings legal obligations to keep it safe and ensure privacy. Only authorised staff should have convenient access to it.

Wireless access control – a powerful solution

ASSA ABLOY's custom-built, battery-powered locks help you meet your data security and regulatory needs. The Aperio KS100 Server Cabinet Lock and C100 Electronic Cylinder protect server cabinets and drawers. They also integrate seamlessly with almost any new or existing security system.

Aperio C100

electronic server rack cylinder

Instant, secure access control for any server cabinet

Fast installation

Installing an Aperio C100 cylinder takes only a few minutes. No cabling, no drilling

Smart credentials

Compatible with all supported RFID technologies: no need to change your current credentials

Easy integration

No database integration needed. Plug it straight into your supported security system

Replace the cylinder on your existing server rack lock

Aperio C100 is a battery-powered electronic lock offering wide compatibility with all cylinder-type locking. When you fit a C100, you no longer manage physical keys – or need to replace locks when one goes missing. You extend your control over server security with scheduled user rights and the ability to see who accessed the server and when.

The Aperio C100 for server racks is available in Euro profile only. SCAN and Swiss mechanical cylinders may be replaced with standard C100 cylinders.

Aperio KS100 electronic server rack lock

Comprehensive protection for your server racks

Improved security
Door and lock status change alerts. Tamper protection offers a higher level of security. Optional side-panel sensors can be monitored

Improved monitoring
With monitoring functionality and audit trails, it is ideal for co-located centres

Online/Offline integration
Aperio KS100 can work within an online system or as an offline lock

Key cylinder version is available as an option.

Add a full feature lock to your server rack

Specifically designed to secure server racks, Aperio KS100 allows you to monitor and control access to your onsite or co-located servers from the same access control system that filters access through doors and other openings. You protect precious data physically without having to wire the racks. It's easy to install and cost-efficient to operate.

Designed for standard 25mm × 150mm server lock openings, KS100 is compatible with a broad range of server racks.

Add control to all access points

Upgrade your entire building with Aperio

Monitor and control exactly when and how rooms and data are accessed – and by whom. Add doors and server racks to your EAC system – easily and cost-effectively. Aperio provides locking devices for every access point.
